<b>Effect</b>	<b>15W / 18W / 20W / 40W</b>
<b>Voltage</b>	<b>230V</b>
<b>Mounting</b>	<b>UV flykillers</b>
<b>Warranty</b>	
<b>Price</b>	

All our units can be used with shatterproof UV-flourescending lighttubes. 80 % of all sold units are sold with shatterproof lighttubes, because of HACCP regulation.

In food preparation areas it's a must to use shatterproof tubes to avoid exploded parts of glass from a broken lighttube by accident.

Sleeving integrity is maintained for the full 12 month life of the tube. Fluorinated Polymer (FEP) shatterproof coating allows 97% of effective UV light to pass through the coating

By seperate order of lighttubes it's important, that you have exact size and power ready.

After one year is the effect of a lighttubes reduced by 85%.

**UV-flykillers in food preparation areas have to be with shatterproof tubes acc. to HACCP.**

# Fly-Add

<b>Name</b>	<b>Glueboards</b>
<b>Material</b>	<b>Hard paper</b>
<b>Type</b>	<b>Feromone</b>
<b>Lifetime</b>	<b>+ 2 year ( dry storage )</b>
<b>Certificates</b>	<b>CE – HACCP - TUV</b>
<b>Dimensiones</b>	<b>15-70 cm</b>
<b>Montage</b>	<b>UV-flykillers</b>
<b>Warranty</b>	
<b>Price</b>	

When you buy glueboard flykillers first time, we highly recommend you to order extra set(s) of glueboards. A glueboard full of insects is the same as a book with black pages and black letters !

The glueboards are coated with a thin film of feromones to attract insects combined with the strong UV-light, to give a maximized result in daylight, too.

All glueboards are cut in specific sizes to match our product line. That means it's rarely, that you can expect, that any of our glueboards is a match to any other flykillers on the market.

If you have a flykiller from another brand, it might be more profitable to invest in a new flykiller, because the costs for new lighttubes and glueboards are high – compared to a new updated flykiller with new tubes and glueboard.

**Min. order of glueboards is 6 pcs. ( typical 1 year ).**
